

DETERMINING YOUR POLE POCKET SIZE

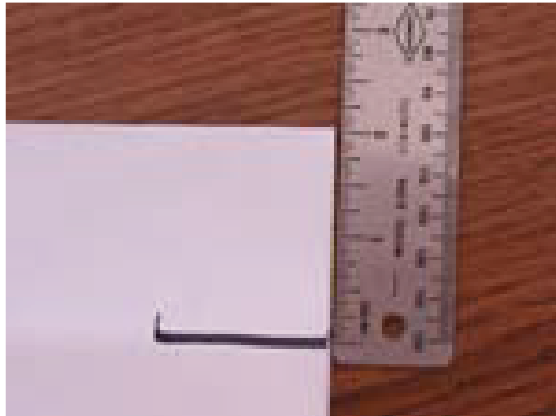

STEP A

Take a pipe, dowel, or a rod that you will use to slide into the desired banner. Wrap a piece of paper around this object. Mark the position on both sides of the paper where the stitching line will be.

Note: Give enough slack so it is loose enough to slide the object comfortably. More slack may be needed, especially when you have to slide a long pipe or dowel, etc.

STEP B

Slide the object out and place the paper flat on the surface. Measure the distance from the marked line to the edge of the of fold. Use this measurement when ordering a banner; input this measurement in the finishing dropdown field in the estimate/order page.

Note: Above method can be used for different shape of pipe such as square hexagon, oval, etc.
